RAPTOR FINANCE

A token for hodlers that like to help the fight against climate change!

Available on the Binance Smart Chain
Address: `0xf9a3fda781c94942760860fc731c24301c83830a`

INTRODUCTION

The DeFi world has been absolutely exploding in the 1st quarter of 2021. Concepts like Yield Farming, Staking and Liquidity Mining have taken over the DeFi world with participants earning by "locking" their tokens for a prescribed time, much like traditional interest accounts, but with much higher yields.

While generally this is a safe way to earn passive income, the above concepts have a major flaw which is generally known as impermanent loss.

THE RISK OF IMPERMANENT LOSS AND HOW WE MITIGATE IT

Simply stated, while you are farming/time-locked staking and if the value of the underlying token reduces significantly while it is time-locked, the value of your total account will be far less than if you had simply sold your tokens before the massive downturn allowing you to take profits and rebuy back in at the lower price. This applies even though you are still farming rewards.

The only way to completely avoid this loss is to not farm but for most people to hold onto their tokens and stake them on our platform, therefore:

- we greatly incentivise holding and no time-locks on staking.
- While doing so, you earn up to the block interest (per 3 seconds) at a community-governed rate.
- An auditable community wallet will also take part in this mechanism, generating funds to donate to charities whose mission is to save the planet.

This is being done to not only generate rewards for us as a community but to allow a foundation that has vowed to save the environment to benefit from such an amazing financial system.

The Raptor smart contract applies a 7% total tax on all transactions (buys/sells). This is burned from the total supply of Raptor allowing us to deflate the inflation caused by staking. This means the number of tokens in your wallet will increase perpetually as you stake your Raptor and claim your rewards. This way, impermanent loss can be avoided altogether and in effect you get paid for just staking Raptor.

COMMUNITY VALUES

We strongly believe in the power of a transparent and open communities. We are convinced, that this project should at all times governed by the community and the community should be involved in the further development of his project. By investing into Raptor, you become part of that community and we will welcome you with open arms.

RAPTOR FINANCE

A token for hodlers that like to help the fight against climate change!

TOKENOMICS

The following distribution is applied to the tokens:

SYMBOL: RAPTOR
INITIAL SUPPLY: 1,000,000,000,000,000
BLACK HOLE BURN: 520,140,000,000,000
REMAINING SUPPLY: 479,860,000,000,000

BURNING AND STAKEHOLDER REWARDS

Following deployment of the contract, 52.515% of the total supply was sent to what is known as the black hole address, leaving the economy with the remaining supply. Specifically, to the following address:

    0x0000000000000000000000000000000000000001

The entirety of the transaction tax (7%) is burned as it is imposed on the transactions. This is done to finance the stakeholder rewards which are paid out at a community-governed APR. This APR is initialized with 5% but can be adjusted by the contract owners.

The balance between burn rate and APR is controlling the deflationary or inflationary degree of the token.

TRUST AND SAFETY

We are aware that our token has no renounced ownership. This is because we need the possibility to execute the adjustment the community voted for. The privileged functions ("owner privileges") can only executed by the token owner, which is namely our founder, Ismail van Essen. You can find his contact information and social media links on our homepage.

Our founder guarantees with his name and public presence the safety of our investors. The execution of privileged smart contract functions can be tracked at the following address:

    0x54eb1724150c8c30ac8a35db0be2e54cc3f1453e

Furthermore, any change of ownership is publicly visible using the "owner" variable of the smart contract at the respective contract address.

The functionality and structure of our token contract is subject of an audit by industry leader Certik & Haechi for additional certification of safety.
